

'simpler model' = a lower-fidelity model vs the reference — elegant: tracks geometric slope (x,x') not canonical (x,px)

lighter bar behind + lighter value above = fast-math (relaxed FP), shown when $\geq 5\%$ faster than the IEEE bar

* Cheetah/SciBmad/Bmad/Synergia have no chromatic-paraxial model here; they run the costlier exact map (agrees within tol)
